Inspiration

Inspiration is a tool which allows you to think and learn visually. Through the implementation of pictures, you can place your thoughts in a diagram formation. We call this process mapping. This visual process provides the learner to easily see how their thoughts relate to one another. The learner then will be able to switch from this concept map to outline form. The software allows the user to switch back and forth from visual mapping to an outline. When all of the information is in place, the user can then pull their ideas into a well structured written document.

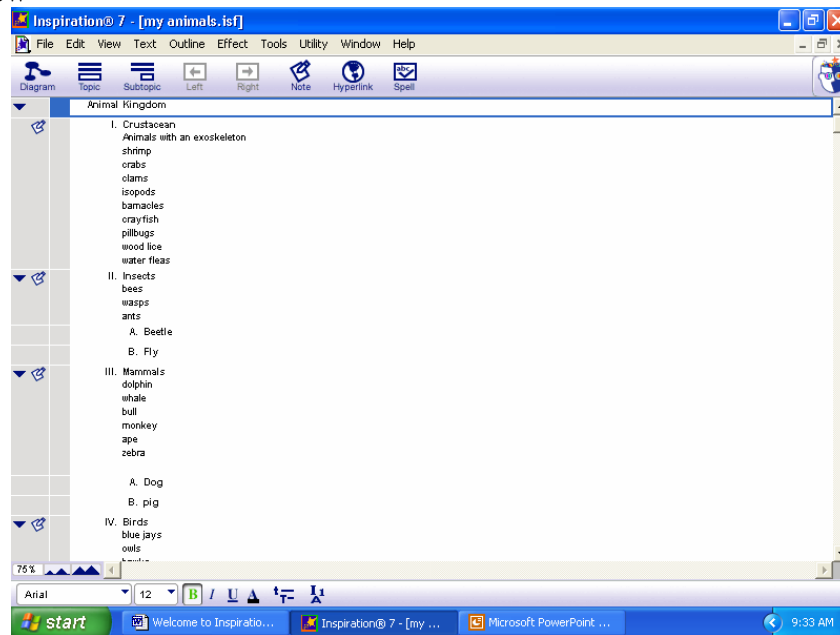

Example of a map.

Pressing the “Outline” button on the diagram bar will convert from map to outline.

Outline View

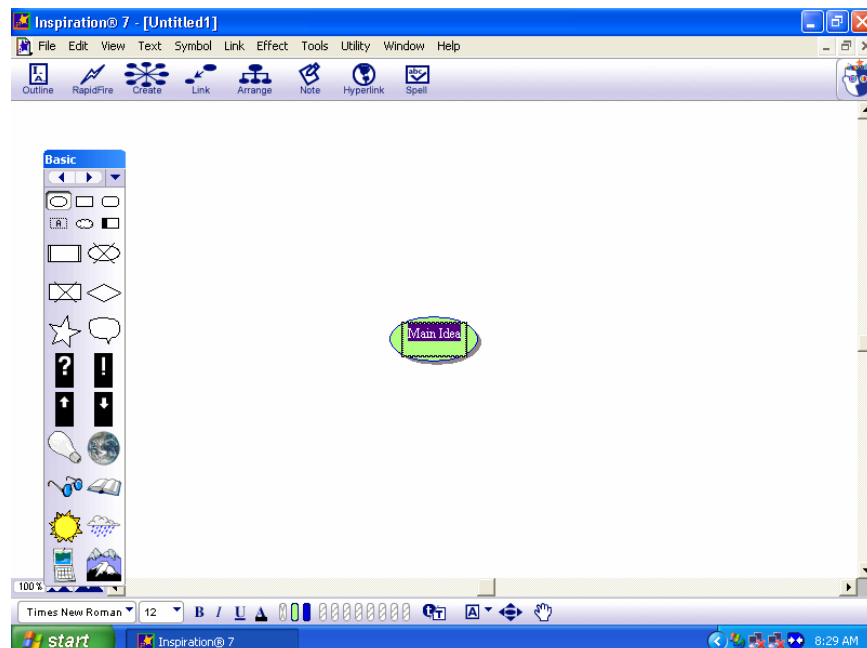

Pressing the “Diagram” button on the Diagram toolbar will bring the user back to mapping.

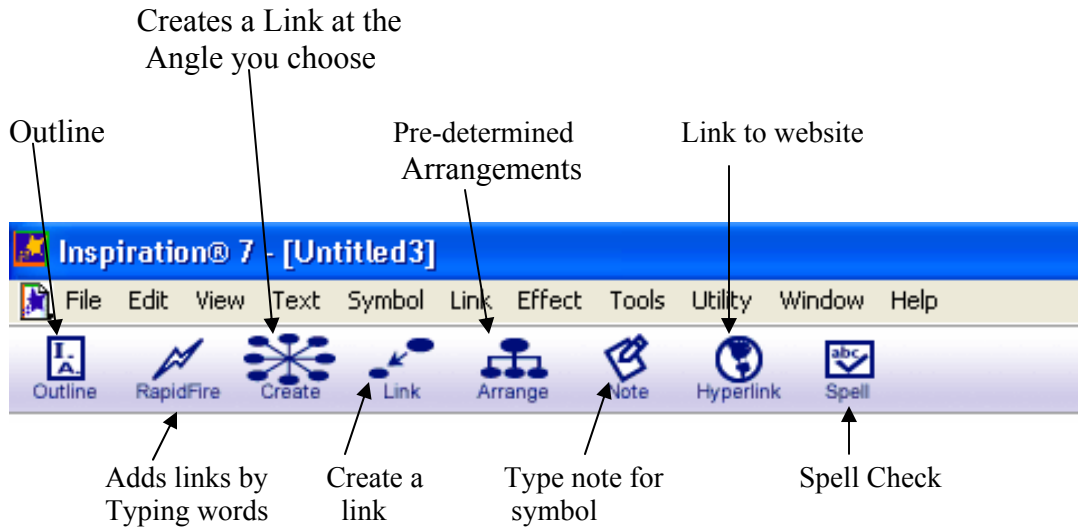

Open Inspiration by selecting “Start” → “Programs” → ”Inspiration”

Notice the screen automatically opens with a “Main Idea” in place ready to be filled in. Below is the opening screen to Inspiration.
